

How to save dead iPhone 6 from water damage

See the discription under my YouTube video for more details. Basically though, my iPhone was completely submerged many times on a white water rafting trip. It died and I was able to bring it back to life perfectly without opening it or paying big bucks.

INTRODUCTION

iPhone 6 Water Damage from White Water Rapids adventure 100% Fix Back from the dead!

I went white water rafting in late Aug 2015. My iPhone 6 was completely submerged in the river 4 different TIMES!!!! It spent a lot of time under water. It went to blue screen after the first dunking and then died completely after the 2nd. I didn't try turning it back on until after the 4th dunk to no avail. It was completely dead! I was totally blown away by this fix. Damprid saved the day. Here's how to bring your phone back to life. I spent a lot of time researching and analyzing the best way to save my phone without paying someone big bucks to extract my data that hadn't been backed up yet.
